

## The Maryland Psychiatric Research Center (MPRC)

### **Description:**

The Maryland Psychiatric Research Center (MPRC), an international leader in schizophrenia research, is accepting applications for a two-year training fellowship. The MPRC is part of the Department of Psychiatry, University of Maryland Baltimore School of Medicine. The MPRC has a strong record of helping fellows develop successful careers in diverse research areas within the context of schizophrenia. Current research areas include psychopharmacology, behavioral neuroscience, developmental neuroscience, neurochemistry, neuroendocrinology, neuroimaging, post-mortem, psychophysiology, cognitive neuroscience, drug treatment trials, ethics, and genetics.

The goal of the fellowship is to train psychiatrists, psychologists, pharmacists, and basic scientists to become leading researchers in the area of schizophrenia. The program combines individual mentored basic and clinical research with educational experiences. General educational activities include MPRC's internal course on schizophrenia, journal clubs, meetings with invited outside senior researchers, grant writing workshops, and individualized career development.

### **Requirements:**

Applicants must hold a M.D. with completed residency training in psychiatry, a Ph.D. in psychology, neuroscience, basic science relevant to the fellowship goal, or a PharmD. Only U.S. citizens, non-citizen nationals, or permanent residents can apply.

Positions must be filled by **June 30, 2008**.
